

PRESS RELEASE

Data Centre World Frankfurt

Frankfurt, November 10th 2015

Bulk Infrastructure will officially launch today its presence in the European data centre market by presenting the **N01 Campus** that is located in Southern Norway.

"With a data centre site area of 300 hectares (3 000 000m²), national and international connectivity and truly renewable power resources of more than 3600MW, the **N01 Campus** has the potential to be the largest data center campus globally. Due to the constant surplus of hydroelectric power the site can offer the lowest spot price in Europe", says Peder Nærbø, President and Founder of Bulk Infrastructure.

"Germany represents the most expanding and innovative approach towards future data centre needs, I am very pleased to announce the launch of **N01 Campus** at Data Centre World in Frankfurt", continues Peder Nærbø.

N01 Campus is located next to the largest electricity hub in Norway, and offers dark fibre infrastructure to major European cities like Frankfurt, London, Amsterdam and Paris. **The N01 Campus** will provide actual green data centre operations at a considerably lower cost, and will be an attractive partner for handling the fast growing needs for data centre space.
